SUMMARY

I connect product design, design systems, and implementation to carry complex experiences from first decision through production. More than a decade at Tire Rack spans ecommerce and dealer journeys, reusable systems, accessible interaction patterns, and hands-on web implementation. In independent mobile work, I direct agent-assisted builds and review the resulting behavior, design, and release quality.

SKILLS

Product and experience design: Product strategy, UX/UI design, interaction design, information architecture, user flows, prototyping, responsive design, accessibility.

Design systems: Design tokens, semantic naming, component contracts, variants and states, governance, documentation, adoption, contribution guidance.

Implementation and delivery: HTML, CSS, SCSS/Sass, AEM authoring, Figma, Storybook collaboration, React Native/Expo/TypeScript agent-assisted builds, implementation QA.

Evidence and workflow: Adobe Analytics, WebPageTest, stakeholder collaboration, SEO-informed structure, Claude Code, Figma MCP, Git/GitHub.

EXPERIENCE

Tire Rack - Senior Web Designer - South Bend, IN
May 2021 - Present

Lead product and interface design across ecommerce, dealer workflows, reusable content systems, and internal tools, working with UX, engineering, analytics, SEO, and content teams.

- Co-Founded and led an internal professional development program serving **approximately 90 digital team members**, creating structured learning opportunities across technical, product, and leadership disciplines.
- Redesigned 30+ tire category pages around a shared comparison, icon, and content system. First-month results included **up to 50% conversion lift** on top pages and up to 400% category-entry growth versus the prior month.
- Led the WheelRack dealer journey from vehicle selection through checkout and built its first design system: **200+ tokens and 50+ Storybook-integrated components**. Partnered with a senior React developer on implementation; the framework was later extended into Wholesale.
- Chose a **two-tier, 32-icon system** instead of 90 one-off icons; the library later grew past 100. Shipped comparison charts with reduced-motion support, screen-reader labels, and a text fallback.
- Designed and built 50+ landing pages, then converted recurring patterns into governed AEM templates. Delivery for complex pages moved **from about a month to 1-2 weeks**; two junior designers now use the system.
- Partnered with AEM engineers on 10+ reusable components, defining fields, variants, responsive behavior, and accessibility requirements and writing production Sass. WebPageTest measured **60% faster loads** on pages using the new components.
- Shipped **three AI-assisted internal tools**: a Figma metadata plugin, responsive crop simulator, and presentation system used across Design, UX, and Photography.

Tire Rack - Web Designer - South Bend, IN
2014 - 2021

- Owned responsive ecommerce UI from visual design through **HTML/CSS/SCSS implementation**, collaborating with engineering, SEO, content, and analytics.
- Created reusable page and component patterns in AEM and maintained visual consistency within production constraints.

EXPERIENCE (CONTINUED)

Round 2 Corp - Designer

2013 - 2014

- Created brand, packaging, and product graphics with an emphasis on typography, composition, and production accuracy.

PROJECTS

PlayDraft - Independent Product Designer & Agent-Assisted Builder

2026 - Present

- Led product direction, brand, UX/UI, system rules, and release QA for an iPhone social drafting game; reached **TestFlight in 12 weeks** and released on the App Store.
- Designed a connected social game loop, then used play feedback to replace **next-day community voting with instant scoring** for a satisfying single-session result.
- Directed agent-assisted React Native, Expo, and TypeScript implementation and reviewed the working app before release.

LoopStack - Independent Product Designer & Agent-Assisted Builder

2026 - Present

- Designed an iOS **pattern-review experience** using real HealthKit CGM history to compare predicted and observed glucose responses.
- Made evidence strength and source context visible, separating patterns ready to review from those still developing. Kept the product within review and care-team discussion boundaries.
