Summary

I connect product design, design systems, and implementation to carry complex experiences from first decision through production. More than a decade at Tire Rack spans ecommerce and dealer journeys, reusable systems, accessible interaction patterns, and hands-on web implementation. In independent mobile work, I direct agent-assisted builds and review the resulting behavior, design, and release quality.

Skills

Product and experience design: Product strategy, UX/UI, interaction design, information architecture, user flows, prototyping, responsive design, accessibility.

Design systems: Tokens, semantic naming, component contracts, variants and states, governance, documentation, adoption, contribution guidance.

Implementation and delivery: HTML, CSS, Sass, AEM, Figma, Storybook collaboration, React Native/Expo/TypeScript agent-assisted builds, implementation QA.

Evidence and workflow: Adobe Analytics, WebPageTest, stakeholder collaboration, SEO-informed structure, Claude Code, Figma MCP, Git/GitHub.

Experience

Tire Rack · Senior Web Designer · South Bend, IN

May 2021 – Present

Lead product and interface design across ecommerce, dealer workflows, reusable content systems, and internal tools, partnering with UX, engineering, analytics, SEO, and content teams.

- Co-founded and led an internal professional development program for approximately 90 digital team members, creating structured learning across technical, product, and leadership disciplines.
- Redesigned 30+ tire category pages around shared comparison, icon, and content patterns; first-month results included up to 50% conversion lift on top pages and up to 400% category-entry growth.
- Led the WheelRack dealer journey from vehicle selection through checkout and built its first design system: 200+ tokens and 50+ Storybook-integrated components. Partnered with a senior React developer; the framework later extended into Wholesale.
- Designed and built 50+ landing pages, then established governed AEM templates that moved complex-page delivery from about a month to 1–2 weeks. Partnered on 10+ reusable AEM components; WebPageTest measured 60% faster loads on pages using them.
- Built three AI-assisted internal tools used by Design, UX, and Photography; shipped accessible comparison charts and a two-tier icon system that grew beyond 100 icons.

Tire Rack · Web Designer · South Bend, IN

2014 – 2021

Owned responsive ecommerce UI from visual design through HTML/CSS/Sass implementation. Created reusable AEM page and component patterns with engineering, SEO, content, and analytics partners.

Round 2 Corp. · Designer

2013 – 2014

Created brand, packaging, and product graphics with an emphasis on typography, composition, and production accuracy.

Selected Independent Projects

PlayDraft · Independent Product Designer & Agent-Assisted Builder

2026 – Present

Led product direction, brand, UX/UI, game rules, and release QA for an iPhone social drafting game; reached TestFlight in 12 weeks and released on the App Store. Play feedback led me to replace next-day community voting with instant scoring for a satisfying single-session result. Directed agent-assisted React Native/Expo/TypeScript implementation. [Case study](#)

LoopStack · Independent Product Designer & Agent-Assisted Builder

2026 – Present

Designed an iOS pattern-review experience using real HealthKit CGM history, making evidence strength visible and keeping developing patterns within review and care-team discussion boundaries. [Case study](#)

Education

BFA, Graphic Design · Kendall College of Art and Design · Minor in Web Animation
